# IP-Anti Spoofing How-To

Fernando García - Eurocomercial Inf & Com
Juan P. Cerezo - BT Spain

Typical network

Cases to review

- A - One link to one ISP/Carrier

  - Strict uRPF/static filters

- B - Several links to one ISP/Carrier

  - Strict/loose uRPF/static filters

- C - Several links to several ISP/Carriers

  - loose uRPF/static filters

Cases to review (2)

- D - Customers with one link
  - Static filters/strict uRPF

Equipment

- Cisco
  - Examples need revision/enhancements

- Juniper
  - Lot of things to do

- Other equipment
  - We need everything

Considerations

- Static filters

  - Based on static bogon lists (RFC 1918, etc.)

  - Would need a dynamic method for reserved IANA ranges

  - Better than uRPF in overloaded routers?
